DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-9** are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior-art figs 22-26 (AAPA figs 22-26) in view of level of ordinary skills of a worker in the art.

AAPA figs 22-26, substantially discloses the claimed invention, particularly fig 26's description (spec., page 6) discloses that the ratio (bt/ht) of the width (bt) and radial length (ht) of each stator tooth is approximately equal to 0.42. Thus the AAPA differs from the claimed invention only in one respect that is the range of the ratio bt/ht to be $0.15 < \text{bt/ht} < 0.4$.

Those skilled in the art would realize that to change the size of the stator tooth in order to obtain the optimum or workable ranges involves only routine skills in the art.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the AAPA alternator by changing the size of the stator tooth so that the ratio of the width (bt) and radial length (ht) of each stator tooth is in the range of $0.15 < \text{bt/ht} < 0.4$, as in the claimed invention, because it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.
